

EXP.NO: 3	Text processing using Awk Script
DATE:	

AIM:

To learn and apply AWK programming for efficient text processing, pattern matching, and data extraction from files.

ALGORITHM:

1. Start the program.
2. Open the Linux terminal.
3. Create a sample text file using vi or touch.
4. Enter data into the file (e.g., name, marks, etc.) and save it.
5. Display the file content using cat filename.
6. Execute basic AWK command to print all lines:
 - `awk '{print}' filename`
7. Use AWK to print specific columns (fields):
 - `awk '{print $1, $2}' filename`
8. Apply pattern matching using AWK:
 - `awk '/pattern/ {print}' filename`
9. Perform conditional operations using AWK:
 - `awk '$3 > value {print}' filename`
10. Use AWK to calculate values (e.g., sum or average):
 - `awk '{sum += $3} END {print sum}' filename`
11. Display the processed output.
12. Stop the program.

CODE:

```
# Print all lines
awk '{print}' data.txt

# Print specific columns
awk '{print $1, $2}' data.txt

# Pattern matching
awk '/Amit/ {print}' data.txt

# condition (marks > 70)
```

```
awk '$3 > 70 {print}' data.txt
```

```
# Find total marks
```

```
awk '{sum += $2} END {print sum}' data.txt
```

OUTPUT:

```
[hp@localhost ~]$ awk '{print}' data.txt
Amit 85
Rahul 60
Sneha 78
John 90

[hp@localhost ~]$ awk '{print $1}' data.txt
Amit
Rahul
Sneha
John

[hp@localhost ~]$ awk '/Amit/ {print}' data.txt
Amit 85

[hp@localhost ~]$ awk '$2 > 70 {print}' data.txt
Amit 85
Sneha 78
John 90

[hp@localhost ~]$ awk '{sum += $2} END {print sum}' data.txt
313
```

RESULT:

Thus, AWK scripting was successfully used for text processing, pattern matching, field extraction, and basic computations on data in Oracle Linux.
