

EXP.NO: 2	Study of Unix editors : sed, vi
DATE: 20/01/2026	

AIM:

To learn and practice the features of the Unix text editor vi for file editing and to implement text manipulation using the sed command for stream editing.

ALGORITHM:

Start the program.

- Open the Linux terminal.

Using vi Editor:

- Create or open a file using vi filename.
- Enter insert mode by pressing i.
- Type the required text into the file.
- Press Esc to exit insert mode.
- Save and exit the file using :wq.

Using sed Command:

- Create a sample text file using touch or vi.
- Display the file content using cat filename.
- Use sed to perform operations such as:
 1. Replace a word → sed 's/old/new/' filename
 2. Replace all occurrences → sed 's/old/new/g' filename
 3. Delete a line → sed 'Nd' filename
 4. Display the modified output.

Stop the program.

CODE:

```
# Open vi editor and create file
vi sample.txt

# Display file content
cat sample.txt

# Replace first occurrence
sed 's/Linux/Oracle Linux/' sample.txt

# Replace all occurrences
sed 's/is/IS/g' sample.txt
```

```
# Delete 2nd line
sed '2d' sample.txt
```

OUTPUT:

```
[hp@localhost ~]$ cat sample.txt
Hello World
This is Linux
Unix is powerful

[hp@localhost ~]$ sed 's/Linux/Oracle Linux/' sample.txt
Hello World
This is Oracle Linux
Unix is powerful

[hp@localhost ~]$ sed 's/is/IS/g' sample.txt
Hello World
ThIS IS Linux
Unix IS powerful

[hp@localhost ~]$ sed '2d' sample.txt
Hello World
Unix is powerful

[hp@localhost ~]$ cat sample.txt
Hello World
This is Linux
```

RESULT:

Thus, the vi editor was used to create and edit files, and the sed command was successfully used for text processing and stream editing operations.
